HACKTIVISMO

¿Qué?

¿Quién?

¿Cómo?

¿Es delito?

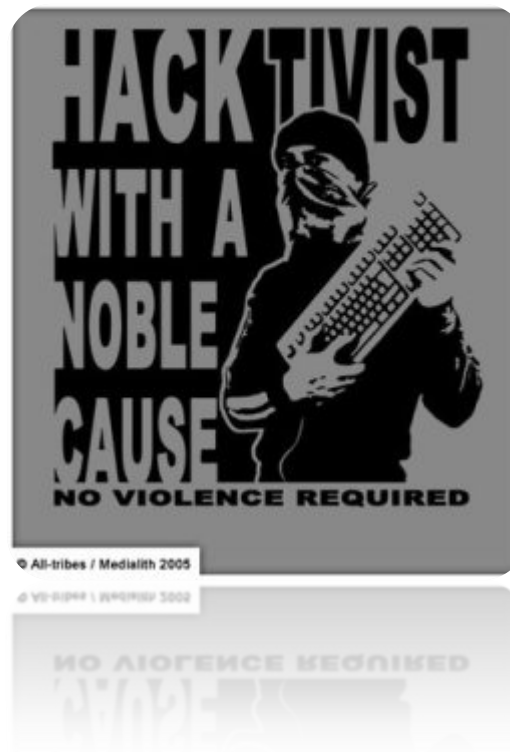

¿Regular Internet?

Interrogantes

 ¿Qué es? ¿Por qué motivos?

Hacktivismo (acrónimo de hacker y activismo): Se entiende normalmente como **la utilización no-violenta de herramientas digitales ilegales o legalmente ambiguas persiguiendo fines políticos**. Estas herramientas incluyen desfiguraciones de webs, redirecciones, ataques de denegación de servicio, robo de información, parodias, sustituciones virtuales, sabotajes virtuales y desarrollo de software para estos fines.

Las **actividades hacktivistas** se extienden a variadas ideas y causas políticas con cuestiones de **libertad de expresión, derechos humanos y privacidad** en una era de **creciente vigilancia tecnológica**, de utilización de propaganda a gran escala y de **control de la mentalidad** por parte de gobiernos y corporaciones (donde es llamada publicidad).

How to Be Anonymous

I'm new, what should I do?

Hello, and congratulations on deciding to fight the good fight! Before you carry out the goals of Anonymous, however, you must first truly understand what they are. Never mind what you thought you knew about the group, here is the best-recommended reading on this site:

Essential Reading [in order of importance]:

1. What is the Plan? – Learn who Anonymous is, and what our plan is.
2. The History of Anonymous – Everything you ever need to know about Anonymous' past.
3. Attitude and Respect Guidelines – Become acquainted with the rules of the website.
4. The Anonymous Meta-Agreement – A document that many users have signed, agreeing to the most basic ideas of Anonymous

Recommended Reading [to help answer some questions on terminology, etc]

[list=1][*]Anonymous Hivemind 101 – The Virtual Tribe <http://www.whatis-theplan.org/t177-anonymous-hivemind-101-the-virtual-tribe>

[*]Anonymous Hivemind 102 – Crafting Virtual Tribes <http://www.whatis-theplan.org/t968-anonymous-hivemind-102-crafting-virtual-tribes>

Suggested Reading [to help you become an Anon]

1. How To Be Anonymous Online (Safety, I2P, and IRC) – A guide to being safer online.
2. How To Be Anonymous Offline (Protest/Riot, Police, Mask Laws, Cell Phones) – A guide to being safer on the street.

Disguised Member of Hacktivist Group "Anonymous" Defends Retaliatory Action Against BART

On Monday, officials with the Bay Area Rapid Transit (BART) were forced to close four train stations during the evening rush hour as free speech advocates attempted to disrupt the evening commute. The protest was called by the activist hacker group, Anonymous, in retaliation for BART's decision to shut down cell phone and mobile-Internet service at four stations last week in an effort to disrupt a protest over the shooting of a homeless man. As part of its self-described "OpBart" campaign, Anonymous hacked into the BART website, myBart.org, and leaked the names, phone numbers and passwords of train passengers. We're joined by a disguised Anonymous member who took part in "OpBart," speaking under the pseudonym "X." "We gave them a taste of their own medicine," X says. ... "We're information activists just trying to make our world

freer and a little better," says X. On the question about the FBI investigation over the hack, X says, "I don't want to get caught ... I am literally running from coffee house to coffee house, from city to city, from state to state to try to avoid this massive, multi-million dollar manhunt they have put out for Anonymous. ... What have we done, Amy? Point to one thing where we've hurt a human being ... BART kills it's innocent people. ... How dare they do this in the United States of America?"

LulzSec Hacks Timeline

Despite adopting a gentlemanly character from the popular Rage Comics as their mascot, incorporating the Nyan Cat meme into their exploits, and claiming a motive of "doing it for the lulz," the Lulz Security hacker collective has no allegiance to Anonymous.

May 7th: "X Factor"

The Target: Upcoming US version of talent and variety show The X Factor.

The Damage: LulzSec published the names, birthdates, phone numbers, and email addresses of an estimated 250,000 contestants.

Grade

Good execution
Boring Target

B

May 10: Fox.com

The Target: Fox.com

The Damage: Fox.com's internal site configuration was revealed, along with a database of 407 sales contacts including their names, email addresses, passwords, and other sensitive data.

Impressive
targeting of
sales contacts
for maximum
damage

A

May 15th: UK ATMs

The Target: UK ATM Database

The "Damage": LulzSec published a database of 3154 ATMs in the UK, including their ID #s, the companies that owned them, their locations, the machine type, and how much each charges.

What do you
expect to do
with this?

F

May 23rd: Sony Music Japan

The Target: Sony Music Japan

The Damage: A small and unimportant snippet of Sony Japan's internal data was published.

Embarrassing
breach of
security, but
little damage.

C

May 30th: PBS

The Target: PBS

The Damage: Main site defaced with Nyan Cat, false article about Tupac still being alive published to look like PBS, entire DNS map and server configuration revealed, and databases of staffers, authors, and pressroom leaked.

Efficient,
stylish, and
well-executed.

A

June 2nd: "Sownage"

LulzSec begins naming their operations and issuing press releases.

The Target: SonyPictures International and Sony BMG

The Damage: LulzSec published user databases for various promotions and properties including AutoTrader, Restles Beauty, Del Boca Vista Sweepstakes, and private partner and admin data.

Absolutely
devastating

A

June 3rd: "Fuck FBI Friday"

The Target: FBI Affiliates Infraguard and Unveillance. Also Nintendo for some reason.

The Damage: The email addresses, user names, and passwords of 180 clients of FBI accredited security firm Infraguard were compromised, in addition to the name and home address of Unveillance CEO Karim Hijazi, and webserver configuration data for Nintendo.com.

Poorly
Represented.
No damage
done to actual
FBI.

B

June 6th: "Sownage Part 2"

SONY

COMPUTER
ENTERTAINMENT

The Target: Sony Computer Entertainment Developer Network

The Damage: Scedev.net source code and Sony BMG internet network map published.

Well-executed,
but damage is
difficult to
assess.

C

June 10th: Pron.com

The Target: Registered users of pornography site Pron.com

The Damage: Over 26,000 email addresses and passwords were leaked, including those belonging to a handful of government and military personnel.

More
entertaining
than most
hacks.

A

June 13th: Titanic Takeover Tuesday

The Target: The United States Senate. Also video game company Bethesda Softworks

The "Damage": LulzSec published so-called "internal data" from a webserver used only for PUBLIC USE. Although the act garnered much press attention, nothing of any value was compromised.

The only
impressive part
was the press
generated, but
the hack was
crap.

F

June 14th: Various DDoS Attacks

The Targets: EVE Online, League Of Legends, The Escapist, and Minecraft servers.

The Damage: Lots of gamers were unable to play their favorite games.

DDoS attacks
are not hacking.
I love
Minecraft.
You guys suck!

F

June 15th: Hack Request Line Open

The Targets: LulzSec begins taking requests.

CIA.gov DDoSed
LulzSec openly mocks 4chan.
Factions of Anonymous begin to attack LulzSec-related sites.

Challenging
Anonymous?
You have
my full
attention.

Crean programa de ciberseguridad

La Jefatura de Gabinete creó el Programa Nacional de Ciberseguridad, al advertir que la seguridad de la infraestructura digital se encuentra expuesta a constantes amenazas que, en caso de materializarse, pueden ocasionar graves incidentes en los sistemas de información y comunicaciones.

La Jefatura de Gabinete de Ministros, por Resolución 580/2011 publicada hoy en el Boletín Oficial, creó el Programa Nacional de Infraestructuras Críticas de Información y Ciberseguridad, que tiene como objetivo la elaboración de un marco regulatorio específico que propicie la identificación y protección de las infraestructuras estratégicas.

Advierte que la seguridad de la infraestructura digital se encuentra expuesta a constantes amenazas, que en caso de materializarse pueden ocasionar graves incidentes en los sistemas de información y comunicaciones, por lo que resulta imprescindible adoptar las medidas necesarias para garantizar el adecuado funcionamiento de las infraestructuras críticas.

La resolución, que lleva la firma del Jefe de Gabinete, Aníbal Fernández, expresa que el Programa deberá elaborar y proponer normas destinadas a incrementar los esfuerzos orientados a elevar los umbrales de seguridad en los recursos y sistemas relacionados con las tecnologías informáticas en el ámbito del Sector Público Nacional.

Cooperativas y Cámaras de proveedores de Internet, quienes en ese caso tendrían la obligación de circularizar entre sus asociados la presente medida, y remitir a

Interrogantes y Cierre

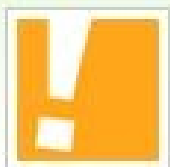

El Hacktivismo tiene y tendrá seguidores y detractores, pero la obtención de datos confidenciales de empresas y/o personas y su posterior publicación es un delito informático y una violación de la propiedad privada; ¿o no?

Estos grupos poseen datos de organizaciones, gobiernos y personas de múltiples países y potencias mundiales en su poder, ¿Quién sabe que podrían hacer con esa información?.

Internet ya no es solamente una herramienta de información, ahora es un mundo con vida social, económica y política propia, ¿podría transformarse en un arma del siglo XXI?

El anonimato de la red ha demostrado influir en decisiones de aparatos políticos y sociales, ¿podría servir como entidad de reclutamiento de células terroristas?

Si los gobiernos controlaran el acceso a internet de los ciudadanos, ¿cómo se sentirían ustedes?
